AI ASSISTANTS

WHAT YOU DEFINITELY NEED TO KNOW ABOUT THEM

AI assistants help with specific tasks they were designed for.

For example, they can support you with language learning, exam preparation, or help your teacher with lesson planning or administrative work.

A chatbot only responds to what you type. In contrast, an AI assistant already understands the task and the situation, so it can reply much more effectively.

A chatbot only knows the information you give it during the conversation. But an AI assistant has extra information from the system prompt and files provided by the person who created it.

Five ideas in five minutes!

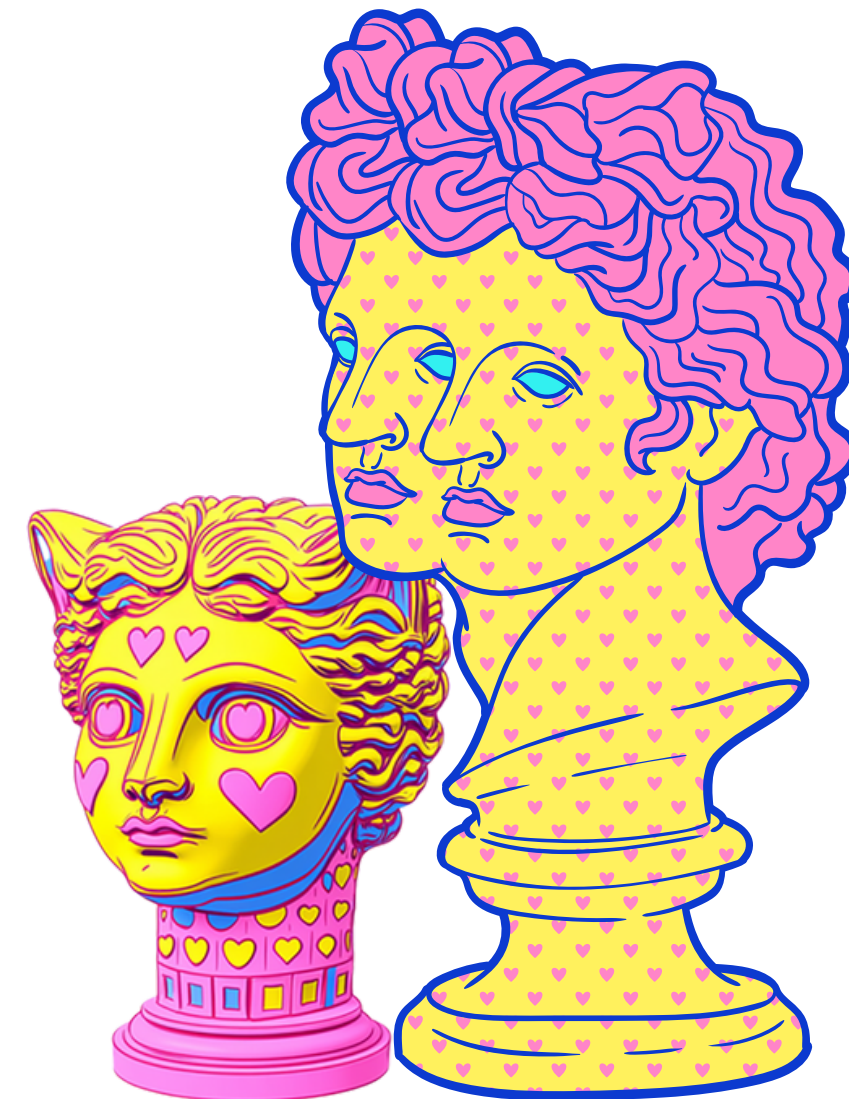

**Let's go! Come up with 5 ideas for how AI assistants could help you,
a friend, a classmate, or a teacher at school.**

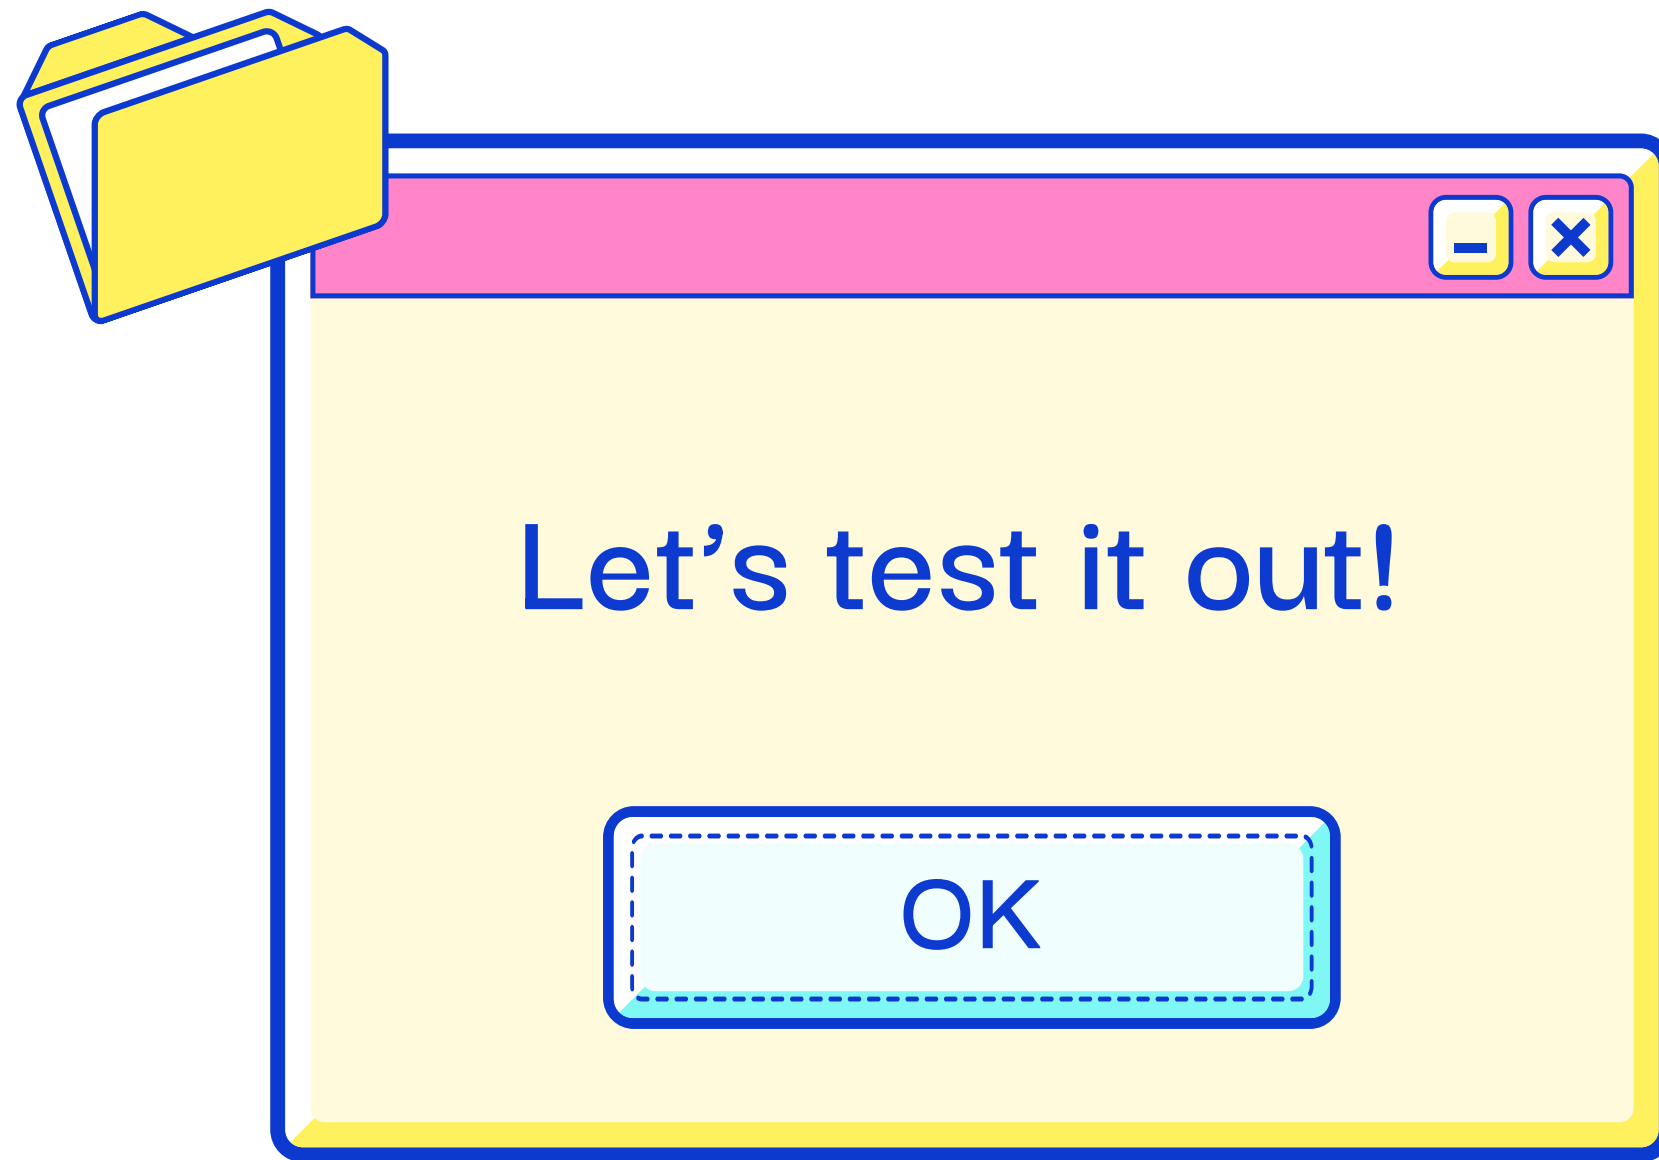

And remember – no idea is silly until it's been tried!

How AI assistants are created

Let's create an AI assistant!

- 1 Short name of the AI assistant
- 2 Clear and simple description
- 3 System prompt
- 4 Starter questions (optional)
- 5 Files (optional)
- 6 Browsing, generation, and analysis

Name of the testing team

Team and name of the tested AI assistant

Tested assistant rating – tick ☒ either or ☐

☐ The assistant gives relevant answers

☐ Speaks clearly and understandably

☐ Is helpful for the target group

☐ Provides correct information

☐ Fits the user’s level

☐ Creates useful content

Rate the AI assistant on a scale
